

Abhishek Gupta

SOFTWARE ENGINEER II | FULL STACK (BACKEND-HEAVY) · MICROSOFT · M.TECH, IIT-K
(+91) 860-462-0958 | ft.abhishekgupta@gmail.com | [in linkedin.com/in/ft-abhishekgupta](https://www.linkedin.com/in/ft-abhishekgupta) | github.com/ft-abhishekgupta | Portfolio

SUMMARY

Full-stack Software Engineer with **6+ years at Microsoft (Xbox)**, backend-heavy with deep experience in C#/.NET, distributed systems and Azure. Experienced in owning products end to end, from React/TypeScript and scalable backend services to cloud infrastructure, with a track record of technical leadership and delivering high-scale, reliable systems.

TECHNICAL SKILLS

Languages: C#, TypeScript, Python, C++, SQL

Backend: .NET / ASP.NET Core, Microservices, Distributed Systems, REST APIs, Event-Driven Architecture, Caching

Cloud & Data: Azure Cosmos DB, Azure Service Bus, Redis, SQL Server, App Service, Terraform, Kubernetes, Docker

Security & Reliability: Managed Identity / RBAC / OAuth 2.0, Threat Modeling, CVE Remediation, Live-Site & On-Call

Frontend: React, Fluent UI / Material UI, WCAG Accessibility, Jest

AI Engineering: Azure OpenAI, RAG & Vector Embeddings (Azure AI Search), MCP & Copilot CLI Plugins

PROFESSIONAL EXPERIENCE

Microsoft — Xbox Services · *Software Engineer II (Technical Lead)*

Noida, India | Sep 2022 – Present

Player Engagement & Publisher News Feed Platform

(Owner & Technical Lead)

- Architected a replacement news feed serving **600+ publishers and 7M+ players** at 5K RPS and 99.99% availability, leveraging **Redis caching**, by reverse-engineering 20+ legacy services and aligning requirements across 5 teams.
- Mentored and led a **4-engineer team** developing a news feed system with 15 REST APIs and **feature-flag-driven migration**, including seller-based RBAC; now in end-to-end testing with the first flagship title onboarded.
- Cut read latency **4x (400–600 ms to 100–150 ms)** and downstream gateway load **87%** by re-platforming a legacy backend onto Azure Cosmos DB with an idempotent dual-write behind a feature flag, achieving a zero-downtime cutover.

AI-Powered Content Certification Platform

(Lead Foundation Engineer)

- Reduced **~1.7 hours of manual review per title to seconds** by building the platform end to end — provisioning all Azure infrastructure and CI/CD and building the distributed workflow-orchestration engine behind every certification run.
- Scaled certification to **150+ titles scanned per day** — every pre-launch submission plus a daily rescan of the entire live catalog — by building a multi-node, multi-region job initiator with idempotent, timeout-hardened evaluator modules.
- Cut false positives **12% on average** by integrating Azure AI content moderation, and shipped copycat detection across the 1,000 most-downloaded titles using Azure AI Search text and image vector embeddings.

Internal Developer Productivity Platform

(Co-Creator & Owner)

- Scaled a hackathon prototype end to end into an org-wide production platform with **100+ daily active users**, onboarding engineering teams across the org and saving engineers hours daily.
- Reduced the manual debugging efforts from **15–20 minutes to 5 seconds** by building the S2S token generation middlewares and 20+ developer tools — API gateway proxy, Cosmos and SQL explorers, and a shareable diagram editor.

Game Metadata & Properties Publishing Platform

(End-to-End Owner)

- Owned end to end—from React UI through .NET backend—the metadata platform powering **100s of daily game publishes**, using a Factory pattern to dynamically process diverse configuration updates across every Xbox storefront.

Self-Serve Publisher Sales & Discounting Platform

(End-to-End Contributor)

- Drove **\$1.7M in first-month revenue** and 60+ studio sign-ups by unblocking a stalled org priority — standing up the Azure first-party (1P) web app end to end and building the React/TypeScript publisher experience across 87 markets.

Mobile Game Add-On Web Store

(Impact Award)

- Initiated and developed an independent vendor tooling solution that published mobile consumables onto a commerce platform never built for them, coordinating 10+ partner teams to launch a flagship mobile title's store **within 2 months**.

Microsoft — Xbox Services · *Software Engineer*

Noida, India | Jun 2020 – Sep 2022

- Pricing & Sales Campaign Authoring Platform** — Built and owned the React / TypeScript sales-authoring application and backend APIs for offer modeling, percent-off discounts and flexible sales campaigns powering customer pricing.
- Publisher Portal Monorepo Architecture** — Spearheaded a decoupled UI deployment flow via independent Azure hosting and CI/CD integrated with Microsoft Partner Center, setting an architectural standard **adopted org-wide**.

PROJECTS

- NexusHub — AI Productivity Dashboard (Xbox Hackathon Winner)** | React, Express.js, MCP.
Pluggable widget dashboard unifying MCPs, pipelines, PR reviews, on-call and AI chat, shipped as a Copilot CLI plugin.
- All-in-One Productivity Suite** | ft-abhishekgupta.github.io/the-todo-app | Next.js, React, TypeScript, Firebase

ACHIEVEMENTS & LEADERSHIP

- Microsoft Impact Awards:** Leadership recognition for two flagship commerce launches.
- Cultural V-Team Champion, Xbox IDC (140+ members):** Led org-wide culture events and tournaments for six years.
- GATE 2018:** AIR 323 (top 0.3%) | **Academic Excellence Award**, IIT Kanpur | **TCS CodeVita 2017:** AIR 145 of 99,473

EDUCATION

M.Tech, Computer Science & Engineering Indian Institute of Technology (IIT) Kanpur

2018 – 2020 | 9.7 CGPA

B.Tech, Computer Science & Engineering IET Lucknow, AKTU

2014 – 2018 | 82.06%
